MAGNAFLOW RECOMMENDS PROFESSIONAL INSTALLATION ON ALL THEIR PRODUCTS

WARNING: When working on, under, or around any vehicle exercise caution. Please allow the vehicle's exhaust system to cool before removal, as exhaust system temperatures may cause severe burns. If working without a lift always consult vehicle manual for correct lifting specifications. Always wear safety glasses and ensure a safe work area. Serious injury or death could occur if safety measures are not followed.

ATTENTION: Always install any supplied band or U-bolt clamps to the proper torque specifications of 40-45 ft-lb for band clamps and 30-35 ft-lb for U-bolt clamps. Over tightening will result in the clamps breaking and will NOT be warranted by MagnaFlow.

INSTALLATION INSTRUCTIONS

Step 1: Begin by removing the fasteners and gasket at the flange junction of the OE resonator,

Step 2 Working front to rear disengage all the welded hangers from the rubber insulators and remove the system. (Retain the insulators as they will be needed to mount the new MAGNAFLOW system.)

Step 3: Install the new system by attaching the Muffler Assembly to the OE outlet with supplied hardware and gasket. Locate the welded hangers to the rubber insulators. Leave all clamps loose for final adjustment of the complete system once installed.

INSTALLATION INSTRUCTIONS

Step 4: Next, Loosely attach the Driver and Passenger side Mid Pipes to the Muffler Assembly using the supplied clamps

Step 5: Attach the Tailpipe Assemblies to the Mid Pipes using the supplied Clamps, fit the hangers into the rubber insulators.

Step 6: Once a final position has been chosen for the new exhaust system, evenly tighten all clamps from front to rear using the torque specifications on page one of the instructions. Inspect all fasteners after 25-50 miles of operation and re-tighten if necessary.
